

Roadmap to Early Autism Diagnosis and Treatment in the San Antonio Area

Early diagnosis begins at home. Learn the developmental milestones and help your child achieve them.

Visit www.onein68.org/resources under the Early Intervention section to find printable checklists for ages 2 months to 5 years.

Talk to your pediatrician if you think your child has a developmental delay. Your pediatrician can do the initial screening and make a referral for additional testing. Trust your instincts as a parent and speak up if you think your concerns are not being heard.

There are only a few providers in San Antonio that can make an autism diagnosis. Contact the Autism Treatment Center to find out where you can get a child or adult evaluated for autism.

ATC is the only nonprofit provider of autism-specific applied behavior analysis, speech and occupational therapy in San Antonio. Contact us at (210) 590-2107 if you need help finding therapy services for a child or adult with autism.

Changing Lives. Building Futures.
